
3G UMTS Wireless Lab Simulation

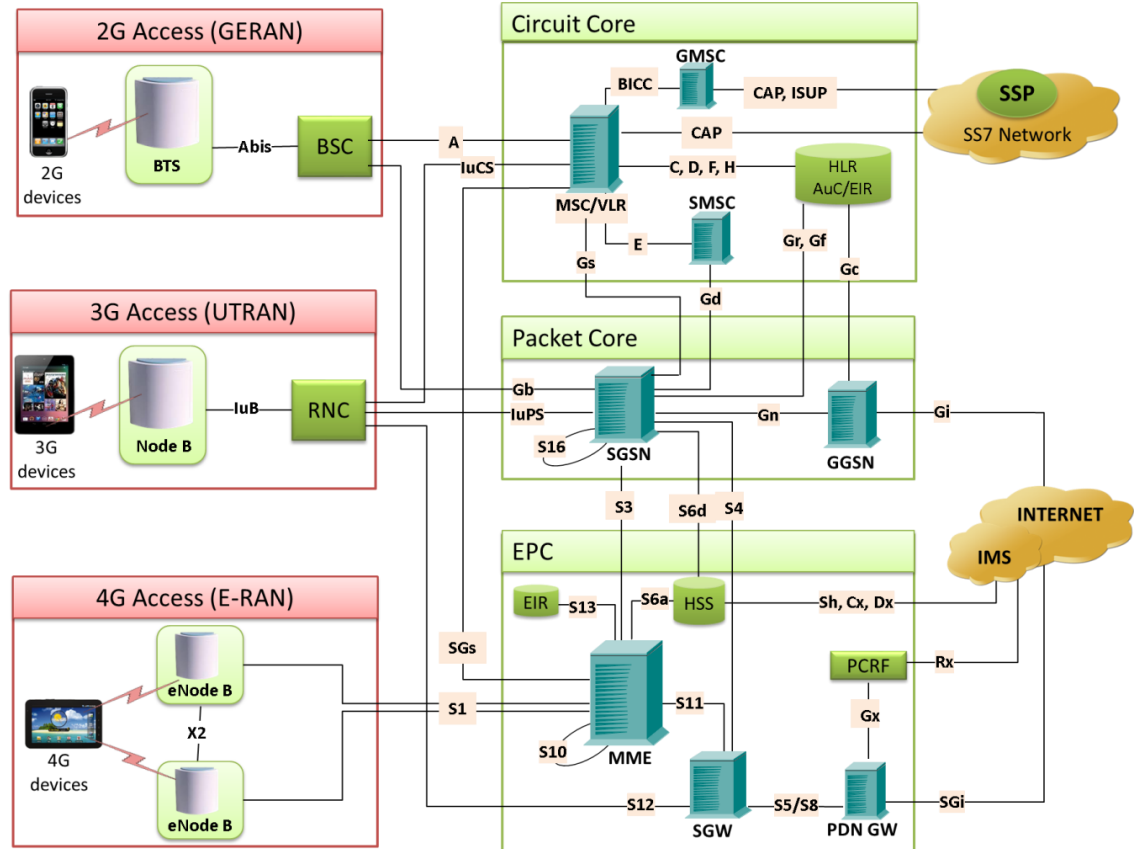

818 West Diamond Avenue - Third Floor, Gaithersburg, MD 20878
Phone: (301) 670-4784 Fax: (301) 670-9187 Email: info@gl.com
Website: <https://www.gl.com>

Communications Networks Lab (CNL)

- Each LAB test system emulates 3G network elements and traffic types within the Wireless infrastructure
- Provides a base network environment that enables the researchers to test applications, devices, and services prior to deployment on real-time networks

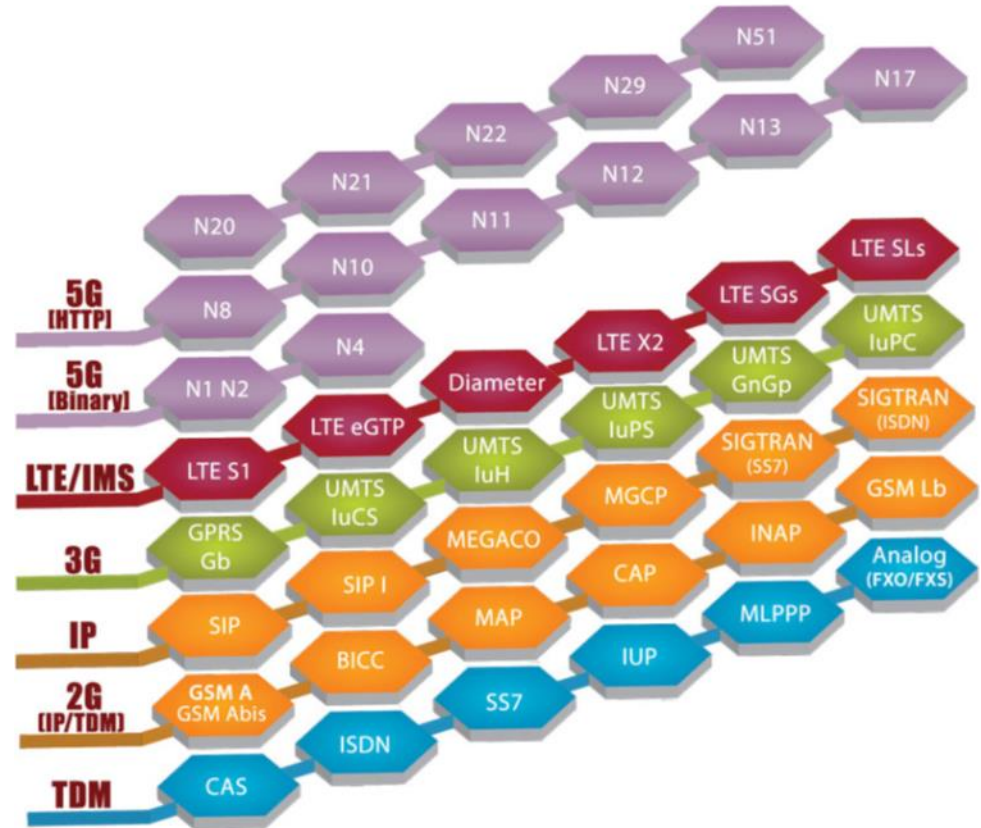

2G 3G 4G Communication Networks

- GSM, TDM and TDMA, Core interfaces T1 E1 but now migrating to IP
- WCDMA, Same Core network as 2G
- LTE, OFDMA, SC-FDMA, All IP

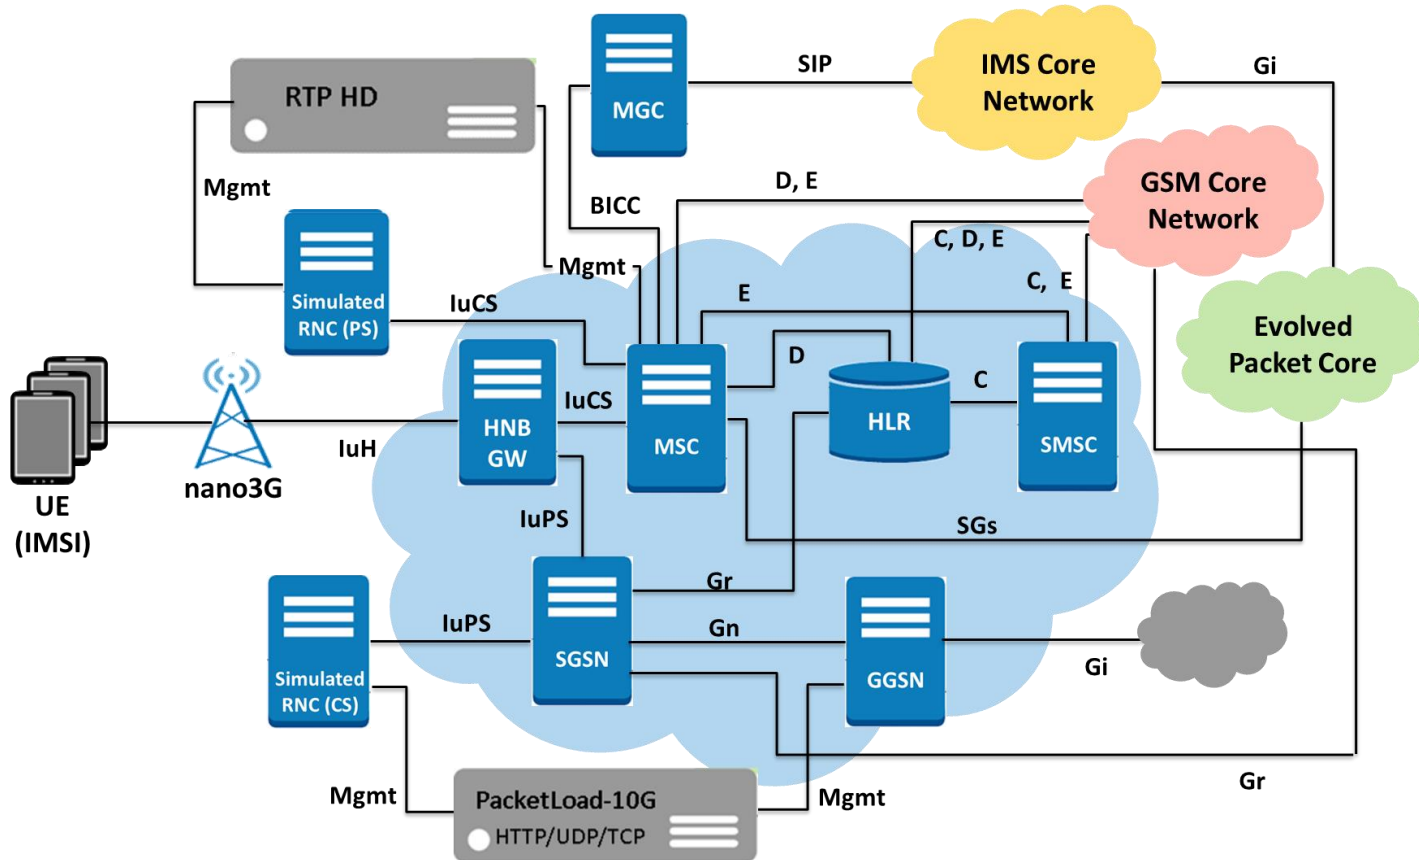

MAPS™ (Message Automation & Protocol Simulation)

- Multi-protocol, Multi-technology Platform
- Emulate any node, and any interface in network with MAPS™ (except Air interface)
- Supports Emulation, Conformance, and Load testing of a variety of protocols over IP, TDM, and Wireless networks

3G LAB Setup

3G CNL - Emulation Options

- Mobile to Mobile Call Emulation
- Mobile to Mobile SMS Emulation in CS Network
- Mobile to Landline Call Emulation
- Mobile Traffic and Web Access Emulation in PS Network

Complete 3G CNL System w/Real NodeB

HD RTP and Packet Data Traffic Generation Appliances

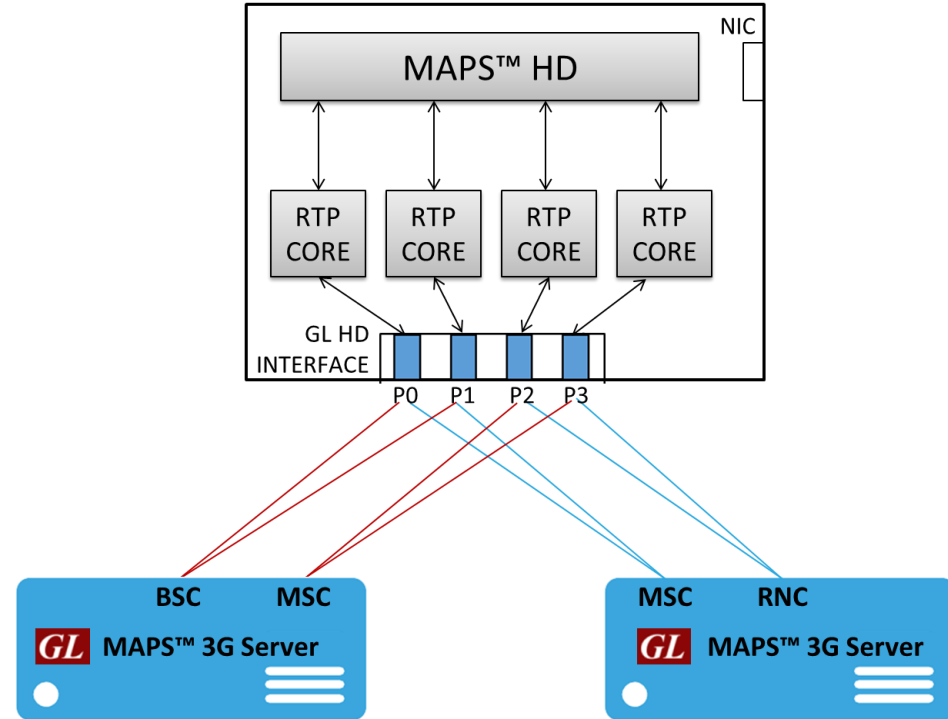

RTP HD System

- The RTP HD Server network appliance supports generation of high volume of calls with traffic for load testing 2G/3G networks
- Specialized 1U rackmount appliance, achieve up to 20,000 endpoints per appliance (5000 simultaneous calls with duplex traffic per port)

Remote RTP HD System

- The load (high density real-time traffic and signaling) emulated in the above lab setup across 2G/3G/4G networks can be evenly distributed in round-robin fashion over the 4x HD ports on the RTP HD system, so that incoming requests may be evenly distributed among all of them
- Each HD port is capable of 5000 simultaneous calls with duplex traffic
- Once the port limit is reached the load is distributed across the remaining HD ports available in the system

PacketLoad™ 10G

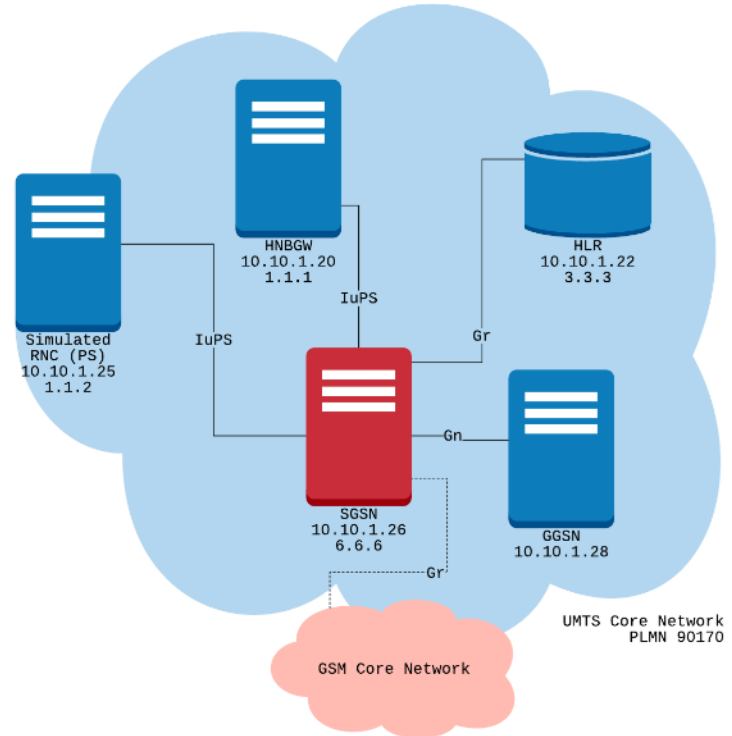

- PacketLoad™ 4 x 10Gbps (PKS174) is a Data Traffic Generator 2U Rack Appliance with 4 x 10Gbps NIC interfaces: total capacity of up to 40 Gbits/sec Stateful TCP/HTTP Traffic
- It supports massive simulation of UEs (up to 500,000) with high density (up to 4 Gbps or 40 Gbps) mobile data traffic simulation for both UMTS, and LTE networks

System Quick Start - Start Remote Controller

- The MAPS™ Listener is configured to run on start-up. While running an icon should be displayed in Windows notification area. If the icon is missing, invoke MAPSListener_x64 from the Desktop
- Invoke MAPS™ Remote Controller from the 3G system Desktop
- The Controller is configured to control the following MAPS™ nodes: RNCs (IuCS and IuPS), HNBGW, HLR, SMSC, SGSN, GGSN
- Start All to connect to all MAPS™ server nodes

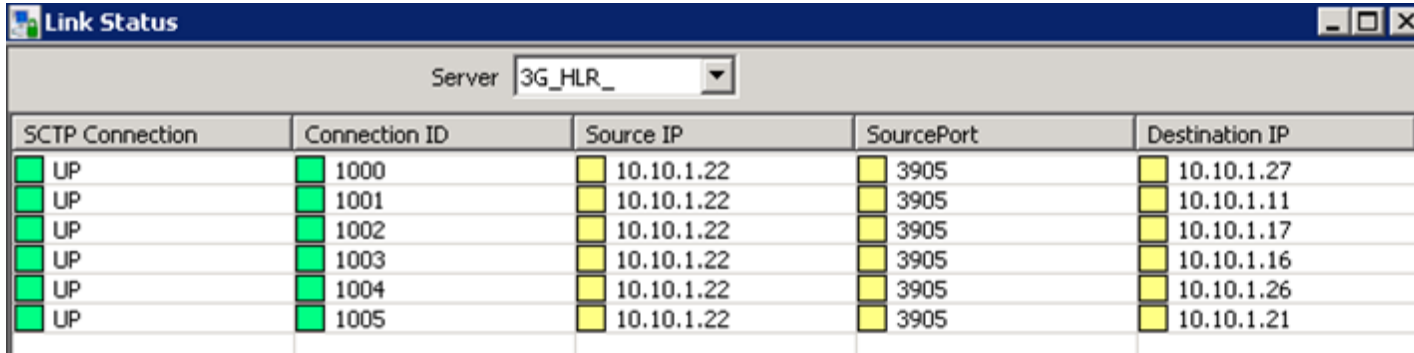

System Quick Start - Start Testbed

The screenshot displays the MAPS (Message Automation Protocol Simulation) software interface. The main window is titled "Testbed Setup - TestBedDefault" and shows a configuration tree for the "HNBGW" server. The configuration is organized into several sections:

- HNBGW Configurations**
 - HNBGW 1**
 - HNBGW IP Address: 10.10.1.20
 - HNBGW Port: 29169
 - HNB Gateway Name: IP Access
 - HNB Gateway Id: 1
 - PLMN Identifiers**
 - Mobile Country Code: 450
 - Mobile Network Code: 80
 - HNB Parameters**
 - Supported HNBs**
 - Supported HNBs 1
 - HNB IP Address: 10.10.1.4
 - HNB Port: 29169
 - Source SCTP Mode: Server
 - Location Area Identifier**
 - Location Area Code: 0001
 - Service Area Code: 0001
 - Routing Area Code: 01
 - RNC ID: 01
 - Enable or Disable CS and PS Network: Both CS and PS
 - M3UA Parameters**
 - HNB GW Point Code: 1.1.1
 - Network Indicator: 1
 - Signaling Link Code: 1
 - HNBGW Address Indicator: International
 - CS Network Parameters**
 - CS M3UA Termination Type: IPSP
 - MSC IP Address: 10.10.1.21
 - MSC Port: 2905
 - MSC Point Code: 2.2.2
 - MSC Address Indicator: International
 - HNB GateWay CS Port: 2905
 - Source SCTP Mode: Client
 - PS Network Parameters**
 - PS M3UA Termination Type: IPSP
 - CSM IP Address: 10.10.1.26

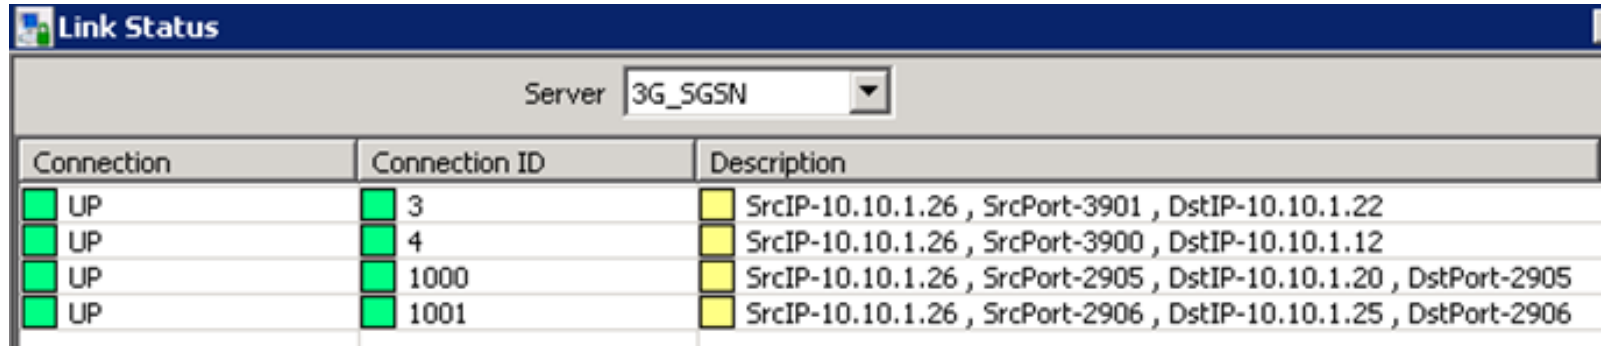

System Quick Start - Link Status

- Cycle through the nodes in Remote Controller and verify the Link Status of the following nodes:

Link Status window showing server 3G_HLR_ with a table of Sctp connections.

SCTP Connection	Connection ID	Source IP	SourcePort	Destination IP
UP	1000	10.10.1.22	3905	10.10.1.27
UP	1001	10.10.1.22	3905	10.10.1.11
UP	1002	10.10.1.22	3905	10.10.1.17
UP	1003	10.10.1.22	3905	10.10.1.16
UP	1004	10.10.1.22	3905	10.10.1.26
UP	1005	10.10.1.22	3905	10.10.1.21

Link Status window showing server 3G_SGSN with a table of connections.

Connection	Connection ID	Description
UP	3	SrcIP-10.10.1.26 , SrcPort-3901 , DstIP-10.10.1.22
UP	4	SrcIP-10.10.1.26 , SrcPort-3900 , DstIP-10.10.1.12
UP	1000	SrcIP-10.10.1.26 , SrcPort-2905 , DstIP-10.10.1.20 , DstPort-2905
UP	1001	SrcIP-10.10.1.26 , SrcPort-2906 , DstIP-10.10.1.25 , DstPort-2906

System Quick Start - 3G Calls w/ Real Mobiles

System Quick Start - 3G SMS w/ Real Mobiles

System Quick Start - Simulated Mobile Traffic

The screenshot displays the PS RNC simulator interface. The top window shows a table of script executions with columns for Sr No, Script Name, Profile, Call Info, Script Execution, Status, and Events. Below this is a control panel with buttons for Add, Delete, Insert, Refresh, Start, Start All, Stop, Stop All, Abort, and Abort All. The bottom window shows a message sequence log with a 'Find' field and a list of messages with timestamps.

Inter-Networking 3G with 2G and 4G Lab (Inter-Operability)

Inter-Network Calls

- Inter-Network Calls
 - 3G user calling 2G user
 - 3G user calling 4G user
 - 3G user sending SMS to 2G user
 - 3G user sending SMS to 4G user
- Roaming calls
 - 3G user calling 2G roaming user
 - 3G user calling 4G roaming user

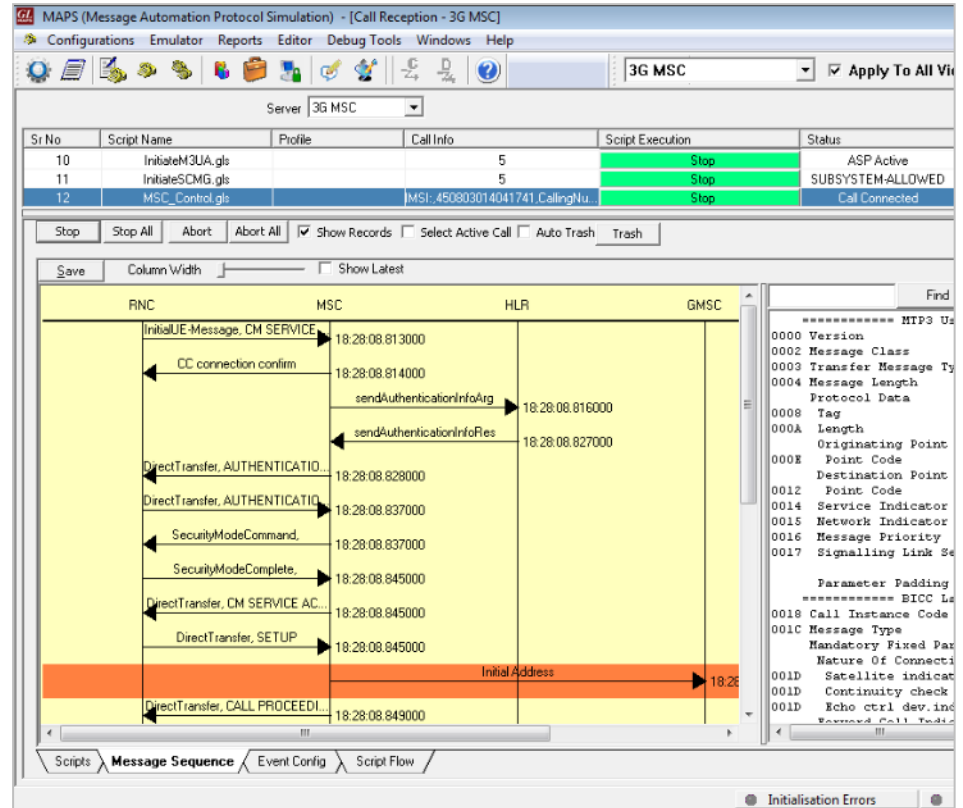

Inter-Network Calls- 3G calling 2G

- When a voice call or SMS call is placed from UE1 to UE2, MSC on 3G network receives call from UE1 and checks for the received MSISDN registration using MAP table
- If MAP is found, then call is routed within same network otherwise call is routed to 2G MSC. MSC in the 2G network routes the request to 2G user

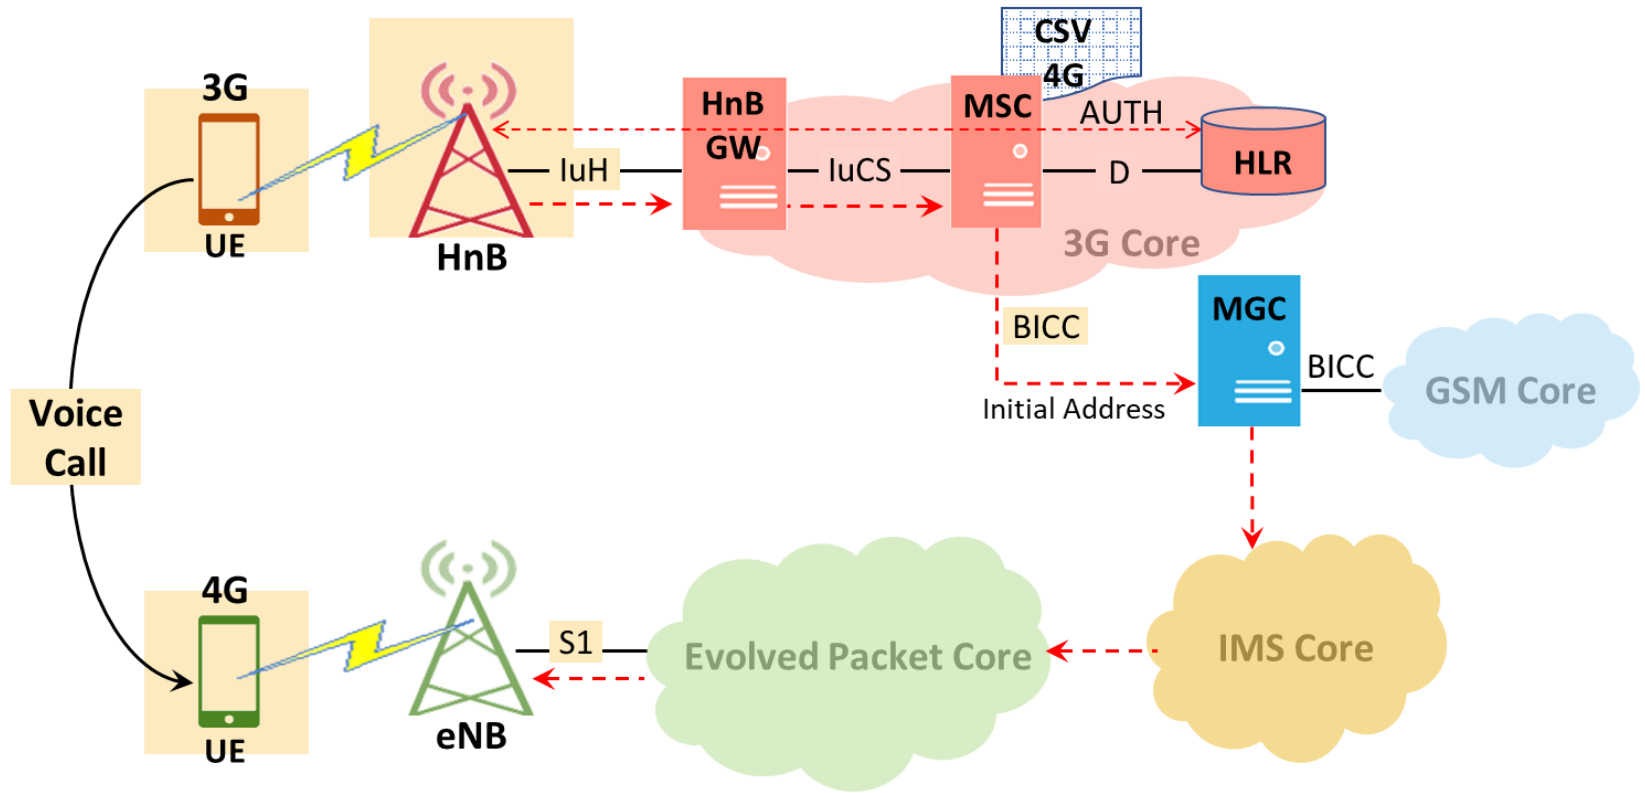

Inter-Network Calls- 3G calling 2G

- CM SERVICE REQUEST message is sent to 3G MSC
- Authentication procedure is initiated at the HLR Node
- When Setup Message (Voice Call) is received, MSC checks whether Called MSISDN is registered to 3G Network. If not, the Initial Address (BICC Call is initiated) towards GMSC

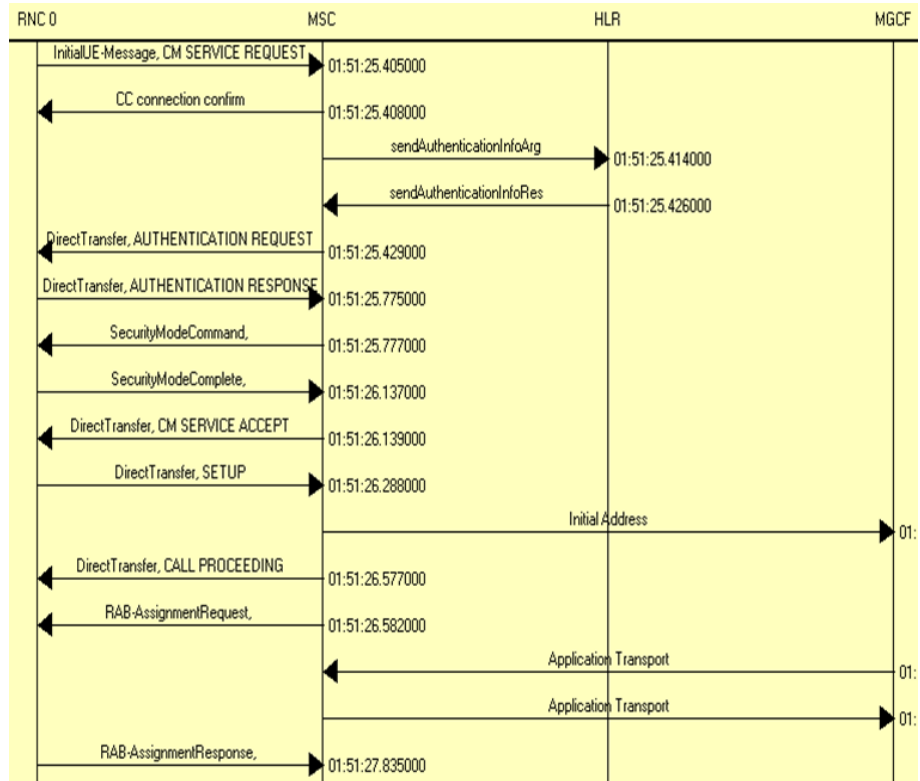

Inter-Network Calls - 3G calling 4G

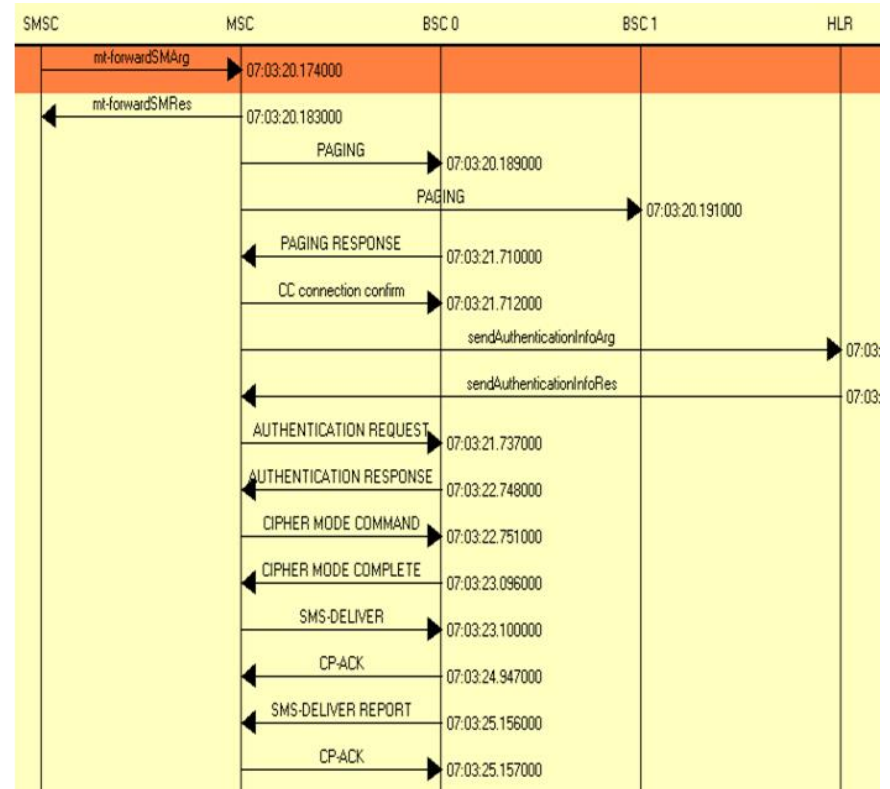

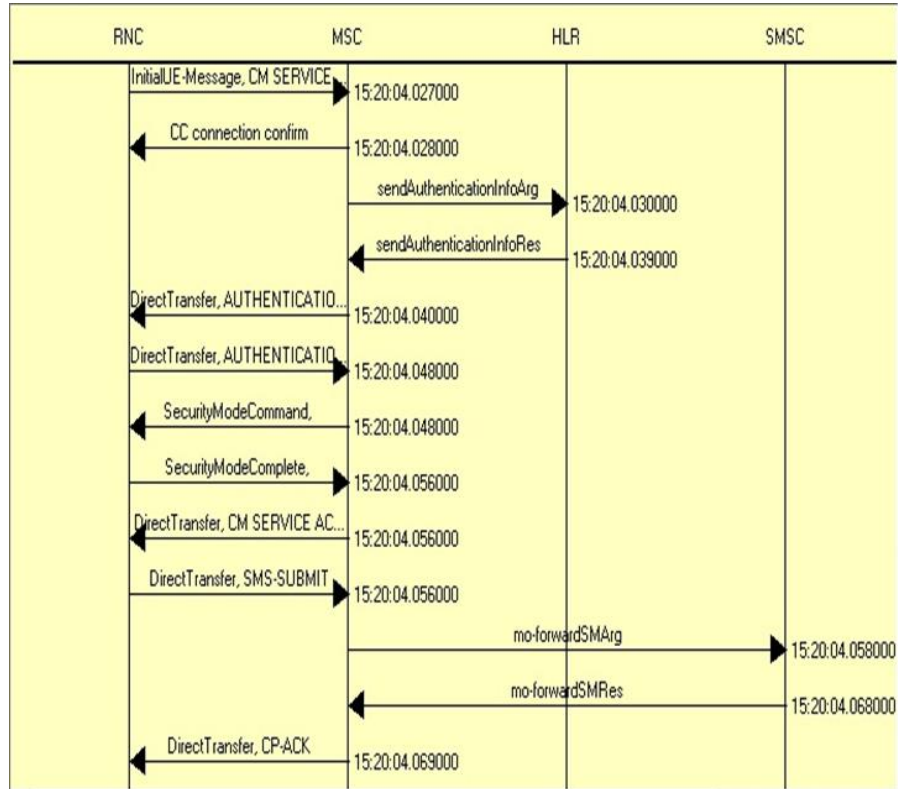

Inter-Network Calls - 3G calling 4G

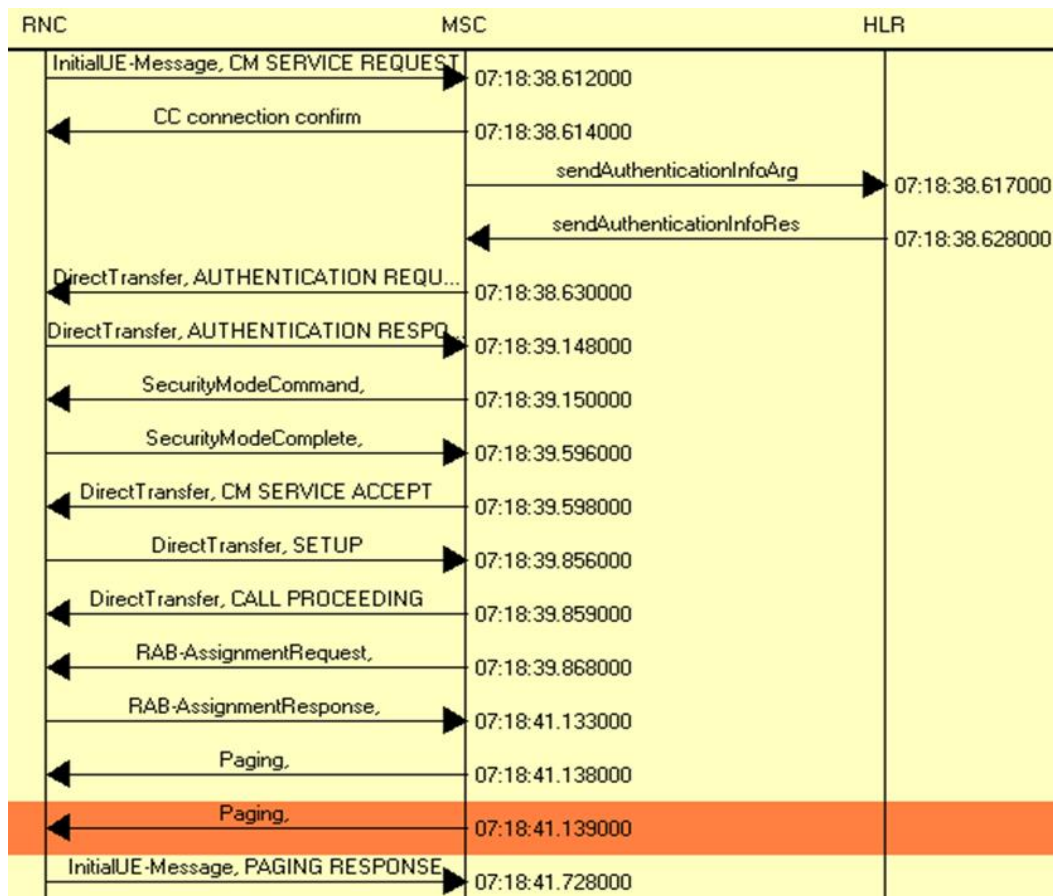

- When a voice call is placed from UE1 to UE2, MSC on 3G network receives call from UE1 and checks for the received MSISDN registration using MAP table
- If MAP is not found, then MSC checks 4G CSV. If MSISDN is available in 4G CSV, then call is routed to MGC using Initial Address Message

Inter-Network Calls - 3G SMS to 2G

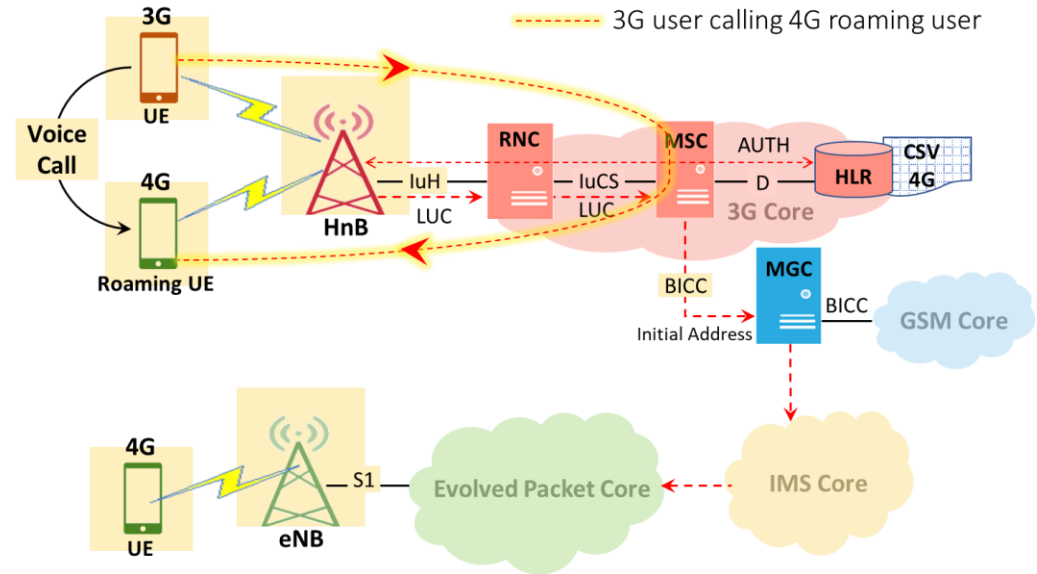

Roaming Calls - 3G Calling 2G Roaming UE UE (Contd.)

Roaming Calls - 3G Calling 4G Roaming UE

- 4G User when roaming into 3G Network registers to 3G MSC, i.e. Location update is performed and MSC has MSISDN vs IMSI MAP stored
- When 3G user calls 4G roaming user, MSC receives Call and checks Called MSISDN is registered into MSC. If registered, Paging in initiated to RNC within 3G network to call 4G user

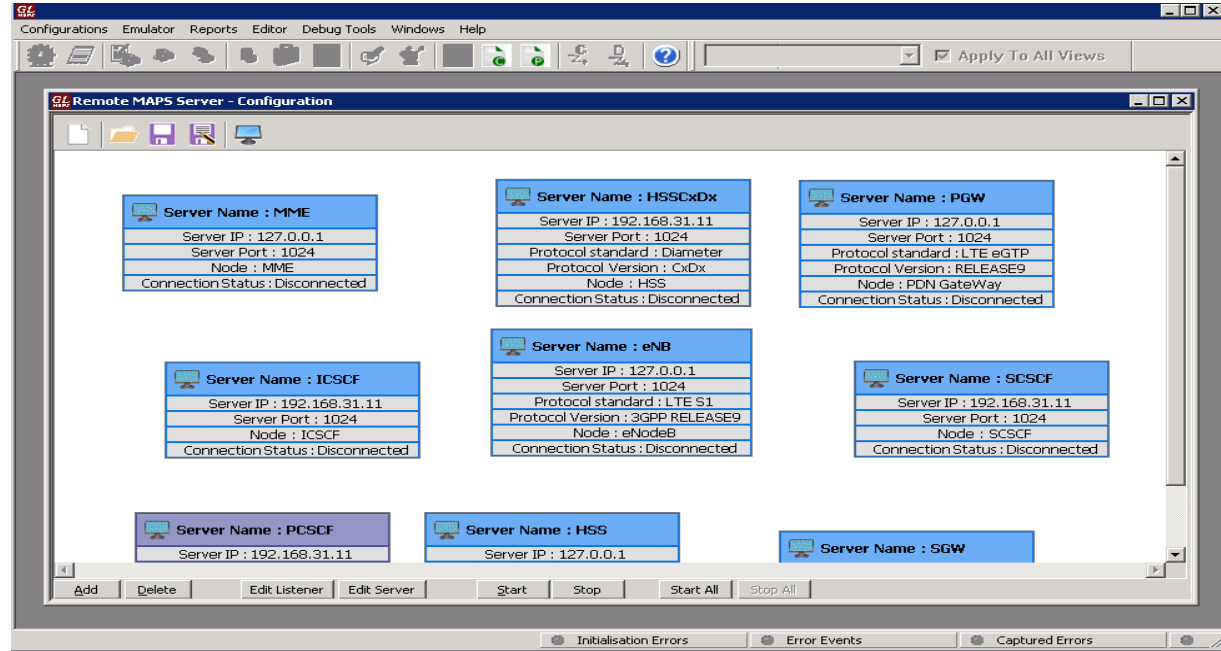

Performance

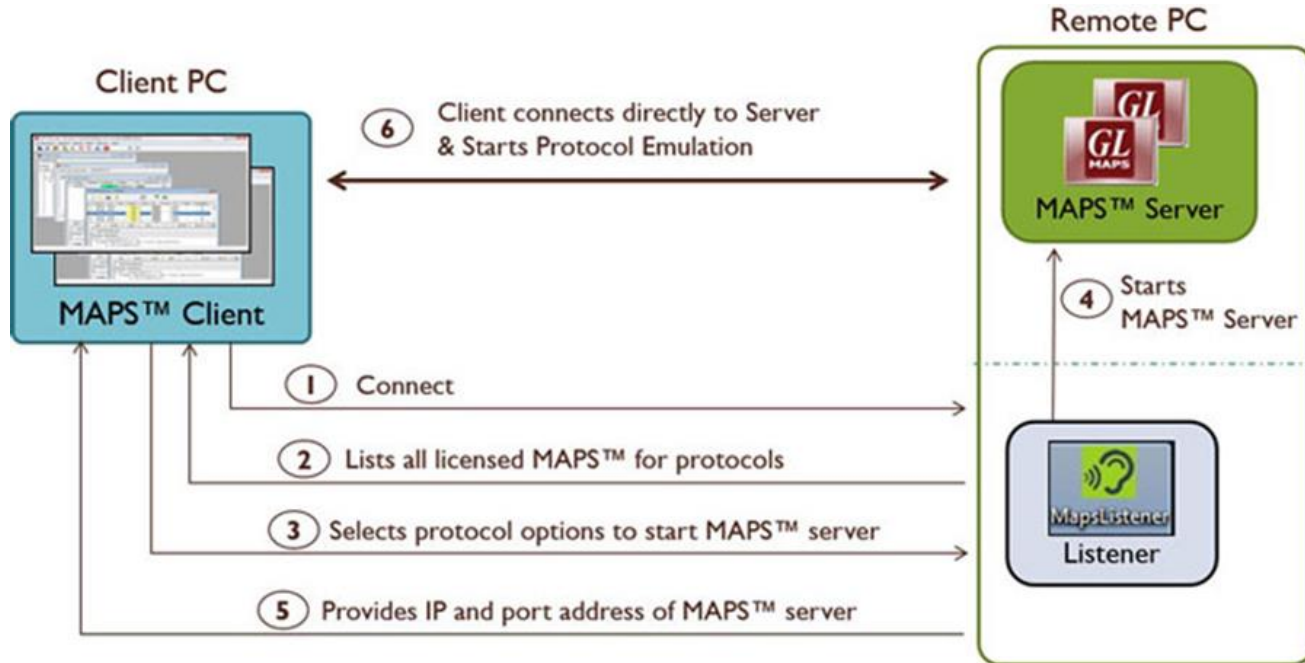

- Load, Stress Performance, and Testing to measure the capability of an entity for various traffic conditions
- Load /Stress test with different statistical distribution patterns with capacity of 2000 simultaneous calls, @ 500 call per second rate
- Control and operate MAPS™ remotely, also gather statistics, logs and reports
- Traffic Simulation to perform end-to-end testing of various traffic - mobile traffic simulation over GTP, transmit/record real time voice traffic, DTMF and MF digits, user defined single/dual tones over established channels

MAPS™ Remote Controller

- Remotely control multiple MAPS™ Servers running on different PCs from a single remote client application
- Allows multiple users to use MAPS™ products installed on a single MAPS™ server

MAPS™ Remote Controller (Contd.)

- Communicates with the multiple MAPS™ Server via Listener over TCP/IP

Performance

- Flexible MAPS™ architecture to test emerging technologies including UMTS, LTE better known as 3G, 4G, IP networks (such as SIP, MGCP, MEGACO, SIGTRAN), and legacy networks (such as CAS, SS7 and ISDN)
- Multi-Interface and Protocol Simulation over different transports layers - IP network (TCP, UDP, SCTP, IPv4 and IPv6), TDM network (MTP2, and LAPD) links
- Multi-Homing feature is supported in SCTP for emulating multiple nodes
- Automation features:
 - Execution of the multiple calls sequentially or randomly to handle incoming and outgoing calls
 - Automation via CLI clients (Python and Java)
 - Scheduler to load pre-defined test bed setups and configuration files to automate test process at specified time
 - Control multiple nodes via Remote Access and run tests

Thank you
